Frontend Developer | Web/App Designer

As a front-end developer with a strong foundation in HTML, CSS, and JavaScript, I am excited to bring my skills and passion for creating engaging user experiences to a dynamic and innovative team.

With a degree in Technology and Communication. I have experience in various projects. The ability to quickly learn and apply new technologies is one of my strongest assets. As part of my final semester of study, I focused on modern frameworks such as React and Jetpack Compose. Building scalable and consistent user interfaces is one of my particular interests. Working with a collaborative and forward-thinking team would allow me to contribute my skills and continue to learn.

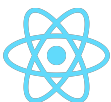

Project Experience

Gen from Jizo: Degree Project

February 2023 — June 2023

- The website was created using React, providing a seamless user experience and a comprehensive platform for cyclists.
- I developed the app using Kotlin and Jetpack Compose, which provides cyclists with an intuitive interface.
- Designed to empower users, Gen offers interactive features, route suggestions, and the ability to track and save cycling progress.

2_Script: React Class Project

September 2022 — January 2023

- Developed a website that taught JavaScript to students in the form of quizzes and levels, using React and Firebase.
- Created an interactive and engaging learning experience by gamifying the content and allowing students to create accounts and save progress.

Volunteer Experience and Other

European Volunteer – UBUNTU against racism 2018

September 2018

- Engaged in non-formal education activities to create spaces where individuals from different backgrounds could discuss issues related to racism and cultural diversity.

Course Student Representative and Financial Coordinator

February 2022 – July 2022

- Served as a course student representative and financial coordinator, overseeing budgets and financial planning while advocating for the needs and interests of students.
